Treatment of hematoma under the eye. Treatment of a hematoma under the eye should be started as soon as possible after injury, attaching ice or a cold object to the damaged area for twenty to thirty minutes. Constriction under the influence of cold blood vessels prevents further spread of the hematoma.

When small, delicate blood vessels break beneath the tissue covering the white of the eye (conjunctiva), resulting eye redness may mean that you have a subconjunctival hemorrhage. A subconjunctival hemorrhage usually is benign, causing no vision problems or significant eye discomfort despite its conspicuous appearance.

## **Blood in Eye (Subconjunctival Hemorrhage): Causes & Treatment**

An eye hemorrhage is a condition where blood vessels inside the eye rupture and bleed, leaving red splotches on the white of the eye, in the retina, or between the retina and the lens. Diabetes, high blood pressure, and eye strain are some factors that can cause eye hemorrhages. Bleeding in the eye is, however, often

A hyphema usually happens when an injury causes a tear of the iris or pupil of the eye. Sometimes people mistake a broken blood vessel in the front of the eye for a hyphema. A broken blood vessel in the eye is a common, harmless condition called subconjunctival hemorrhage. A subconjunctival hemorrhage does not hurt.

A hematoma can result from an injury to any type of blood vessel (artery, vein, or small capillary). A hematoma usually describes bleeding which has more or less clotted, whereas a hemorrhage signifies active, ongoing bleeding. Hematoma is a very common problem encountered by many people at some time in their lives.
